Question 1

Correct

Marked out of 3.00

Flag question

Write a program to read two integer values and print true if both the numbers end with the same digit, otherwise print false. Example: If 698 and 768 are given, program should print true as they both end with 8. Sample Input 1 25 53 Sample Output 1 false Sample Input 2 27 77 Sample Output 2 true

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int a,b,c,d;
5     scanf("%d%d",&a,&b);
6     c=a%10;
7     d=b%10;
8     if(c==d)
9     {
10         printf("true");
11     }
12     else
13     {
14         printf("false");
15     }
16
17     return 0;
18
19
20 }
```

	Input	Expected	Got	
✓	25 53	false	false	✓
✓	27 77	true	true	✓

Question 2

Correct

Marked out of

Objective

5.00

🚩 Flag question

In this challenge, we're getting started with conditional statements.

MUTHURAM 240901062

### Task

Given an integer, ***n***, perform the following conditional actions:

- If ***n*** is odd, print **Weird**
- If ***n*** is even and in the inclusive range of **2** to **5**, print ***Not Weird***
- If ***n*** is even and in the inclusive range of **6** to **20**, print ***Weird***
- If ***n*** is even and greater than **20**, print ***Not Weird***

Complete the stub code provided in your editor to print whether or not ***n*** is weird.

### Input Format

A single line containing a positive integer, ***n***.

### Constraints

- $1 \leq n \leq 100$

### Output Format

Print **Weird** if the number is weird; otherwise, print **Not Weird**.

### Sample Input 0

3

### Sample Output 0

Weird

### Sample Input 1

24

### Sample Output 1

Not Weird

MUTHURAM 240901062

### Explanation

Sample Case 0:  $n = 3$

$n$  is odd and odd numbers are weird, so we print **Weird**.

Sample Case 1:  $n = 24$

$n > 20$  and  $n$  is even, so it isn't weird. Thus, we print **Not Weird**.

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     int a;
5     scanf("%d",&a);
6     if(a%2!=0)
7     {
8         printf("Weird");
9     }
10    else if(a%2==0&&a>=2&&a<=5)
11    {
12        printf("Not Weird");
13    }
14    else if(a%2==0&&a<=20&&a>=6)
15    {
16        printf("Weird");
17    }
18    }
19    else
20    {
21        printf("Not Weird");
22    }
23    return 0;
24 }
25 }
```

	Input	Expected	Got	
✓	3	Weird	Weird	✓
✓	24	Not Weird	Not Weird	✓

Passed all tests! ✓

Question 3

Correct

Marked out of

Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to the square of the third. For example, 3, 5 and 4 form a Pythagorean triple, since  $3^2 + 4^2 = 25 = 5^2$ . You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the output message is in small letters. Sample Input 1 3 5 4 Sample Output 1 yes Sample Input 2 5 8 2 Sample Output 2 no
