GE23131-Programming Using C-2024

Flag question

In this challenge, we're getting started with conditional statements.

Task

Given an integer, **n**, perform the following conditional actions:

- · If **n** is odd, print Weird
- · If *n* is even and in the inclusive range of 2 to 5, print *Not Weird*
- · If n is even and in the inclusive range of 6 to 20, print Weird
- · If *n* is even and greater than 20, print Not Weird

Complete the stub code provided in your editor to print whether or not n is weird.

Input Format

A single line containing a positive integer, \boldsymbol{n} .

Constraints

· 1 ≤ n ≤ 100

Output Format

Print Weird if the number is weird; otherwise, print Not Weird.

Sample Input 0

3

Sample Output 0

Weird

Sample Input 1

24

Sample Output 1

Not Weird

Explanation

Sample Case 0: n = 3

n is odd and odd numbers are weird, so we print Weird.

Sample Case 1: **n = 24**

n > 20 and n is even, so it isn't weird. Thus, we print Not Weird.

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
 2 int main()
3 ₹ {
4 int a;
    scanf("%d",&a);
6 if(a%2!=0)
7 √ {
 8
       printf("Weird");
9
10
    else if(a%2==0&&a>=2&&a<=5)
11 + {
12
       printf("Not Weird");
13
    else if(a%2==0&&a<=20&&a>=6)
14
15 v {
16
       printf("Weird");
17
18
19
    else
20 ₹ {
21
       printf("Not Weird");
22
23
    return 0;
24
25 }
```

	Input	Expected	Got	
~	3	Weird	Weird	~
~	24	Not Weird	Not Weird	~

Passed all tests! 🗸

Question 3

Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to the square of the third. For example, 3, 5 and 4 form a Pythagorean triple, since 3*3 + 4*4 = 25 = 5*5 You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the output message is in small letters. Sample Input 1 3 5 4 Sample Output 1 yes Sample Input 2 5 8 2 Sample Output 2 no Marked out of

Correct
